# 13. Backup

<Abstract>

A screen to output the current settings into the SQL file after setting all the data.

<Screen Image>

<Note>

As there is a backup function within the eAWC configuration tool, this function is not necessary in eAWC for technical staff use.

<Procedure>

1. Enter the folder to save a backup file.

Enter the path name of the folder where you save the file..

* Path name
Windows allows you to create a folder within the recording disk to sort out files. The Name consisting of the drive name, folder name, and file name separated by "/" shows in which folder a file is saved. For instance, the name for for the "Item master.txt file" in the "HOST Communication Folder" in the "Drive C" is indicated as "C:/HOST Communication/Item Master.text". Such file location and name are called "Path Name".

2. Create a backup file.

(1) Press [Start] button.
Create a backup file.
